Subject: Shared freezer MS518

Hi Ken and Mariana,

I put a temperature probe in your freezer in MS518 and have set up an account so that you can see the freezer and room temperatures from wherever there is internet access. Go to this website <https://www.sensaphone.net/login> and login with your UK email address and the password UKYPGY#1. If you would like to move the probe to a different spot, that's fine. Andrew and I will organize/ cover the probe wiring in a few days.

The alarm system is set up so that you will receive a text message to your cell phone number and an email if your freezer is too warm or too cold. If you want to opt out or change this, please log in and edit as needed status. You won't receive alarms if a different freezer in the room is warm.

If you prefer, this freezer monitor website can run in the background on your computer so that you can see the temps for the last month, the room temperature, etc. The website is pretty self-explanatory, but write or call (office is 218-3858, cell is 859-333-9114) if you have questions.

Steve
